```
This sequence is the human parotid secretory protein (hPSP) of the invention. The hPSP DNA is useful for chromosome identification and invention. The hPSP DNA is useful for chromosome identification and is consistent of hPSP (in standard blotting, and protein can be used to detect abnormal levels of hPSP (in standard blotting, and inmune defensive, endocrine or immune system disorders. A particular opportation is diagnosis of cancers of the salivary gland, thymus and pancreas which are associated with high levels of hPSP. The protein is also useful as antifungal, antibacterial, antiparasitic and antiviral ayenessing it, are used in screening tests to identify specific (ant) agonists, e.g. antibodies (Ab), polypeptides and antisense nucleic acids, which are potentially useful for treating conditions associated with excessive hPSP production. Cells containing the DNA are used to express the recombinant protein and this can be used to raise Ab, useful for diagnosis, therapy, for affinity purification and to identify
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               secretory tissue; gastrointestinal Lissue; HPSP, Sjorgen's syndrome; Graves disease, thyroiditis; insulin-dependent diabetes; pancreatitis; ulcerative colitis; Crohn's disease; atrophic gastritis.

This represents a human parotid secretory protein (HPSP). Antagonists that bind specifically to, and modulate activity of HPSP are used to treat cancer and autoimmune diseases particularly of secretory or gastrointestinal tissue, eg. cancer of salivary gland, thyroid, gastrointestinal tract or pancreas, Sjorgan's syndrome, prostate, breast, gastrointestinal tract or pancreas, Sjorgan's syndrome, or grationtestinal tract or pancreas, Sjorgan's syndrome, or care to containing expression vectors comprising the HPSP nucleic acid are used containing expression vectors comprising the HPSP nucleic acid are used to produce recombinant HPSP which is used to generate antibodies and to screen for its antagonists. Antibodies are useful directly as antagonists, to transport drugs to HPSP-expressing cells, to detect cells the express HSPP from natural sources. Expression of HPSP may indicate cell proliferation. HPSP nucleic acid or its fragments are used indicate cell proliferation. HPSP nucleic acid or its fragments are used to elect HPSP-encoding sequences (optionally after amplification by PCR) by hybridisation, particularly for diagnosis and monitoring of disease, but also for mapping the chromosomal sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human; tumour; diagnosis; neoplastic disease; neoplastic cell growth; proliferation; tumourigenesis; identification; cancer; cytostatic; noctropic; neuroprotective; antiinflammatory; immunosuppressive; immunostimulant; antianalogenic; leukaemia; lymphoid malignancy; neuronal disorder; glial disorder; astrocytal disorder; anglogenic;

PRO genes. Exemplary conditions or disorders to be treated with such antibodies and other compounds include benign or malignant tumours (e.g., renal, liver, Kidney, bladder, breast, gastric, ovarian, colorectal, prostate, pancreatic, lung, vulva, thyroid, hepatic carcinomas, sarcomas, glioblastomas, and various head and neck tumours), leukaemias and lymphoid malignancies, other disorders such as neuronal, glial, astrocytal, hypothalamic and other glandular, macrophagal, epithelial, stromal and blastocoelic disorders, and inflammatory, angiogenic and immunologic disorders. AACS8242 to AACS8366 represent PCR primers and hybridisation probes used in the isolation of the human PRO sequences. AACS8367 to AACS8368 represent human PRO polynucleotide and protein sequences given in the exemplification of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          treatment, diagnosis and prevention of cancer. The antibodies and other anti-tumour compounds maybe used to treat various conditions, including those characterised by overexpression and/or activation of the amplified
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  PRO535,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  one of the human PRO proteins designated PR0212, PR0290, PR0341, PR0535, PR0619, PR0717, PR0809, PR0830, PR0848, PR0943, PR01005, PR01009, PR01003, PR01030, PR01037, PR01111, PR01135, PR01182, PR01187, PR01181, PR01218, PR0213, PR0339, PR0834, PR03117, PR01710, PR02094, PR02145 OR PR02198. PR0 antagonists can be used to inhibit tumour cell growth. The PRO polypeptides and nucleotides are useful in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ROY MA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Thirty PRO polynucleotides encoding PRO polypeptides, useful in the treatment, diagnosis and prevention of cancer \cdot

This sequence represents a human secreted protein amino acid sequence.

The invention relates to sequences AAA87725.858774 which encode human

Secreted proteins AAB25763.825812. The proteins include signal peptides.

Included in the invention are a host cell containing one of the cDNA sequences, and a purified antibody capable of binding to one of the cDNA sequences to binding to one of the contained proteins. Also contained in the invention are methods for storing the sequence data on a computer system, and a method for dentifying features of the cDNA sequences using a computer programme. The cDNAs are useful for expressing secreted proteins or fragments to obtain antibodies capable of specifically binding to the secreted proteins. The CDNAs may also be useful in diagnostic, forensic, gene therapy and chromosome mapping procedures and may be used to design expression vectors and secretion vectors. The proteins of the invention may be used to treat diseases including cancer, autoimmune diseases, cardiovascular disorders, cystic fibrosis, hypothyroidism, immunological disorders, amploidosis, brain disorders, skeletal muscle disorders, eye disorders, analyloidosis, microhondriocytopathies, diabetes, atherosclerosis, neurodegenerative disorders, graft rejection, Alzheimer's disease, commentia, hyperlipidaemia, septic shock and impotence.
                                                                                                                                                                                                                                                                                                                                                                                       Human; secreted protein; forensic procedure; gene therapy; chromosome mapping; cancer; autoimmune disease; cardiovascular disorder; cystic fibrosis; hypothyroidism; immunological disorder; amyloidosis; brain disorder; skeletal muscle disorder; eye disorder; obesity; mitochondriocytopathy; diabetes; atherosclerosis; Alzheimer's disease; neurodegenerative disorder; graft rejection; dementia; hyperlipidaemia;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Polynucleotides and polypeptides encoding proteins with signal peptides, useful in diagnostic, forensic, gene therapy and chromosome

The protein and nucleic acids may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate protein expression.

```
probes which are derived from genomic sequences expressed in the human brain. They can be used to measure gene expression in brain cell samples, which may enable the diagnosis and improved treatment of nervous system diseases such as Alzheimer's disease, multiple sclerosis, schizophrenia, epilepsy and cancers. The present sequence is a protein encoded by one of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human brain expressed single exon probe encoded protein SEQ ID NO: 34413.
                                              measuring human gene expression in a sample derived from human foetal liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a peptide encoded by a single exon nucleic acid probe of the invention.

Note: The sequence data for this patent did not form part of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Single exon nucleic acid probes for analyzing gene expression in human
                                                                                                                                                 printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

They can be used to measure gene expression in bone marrow samples, which may enable the improved diagnosis and treatment of cancers such as lymphoma, leukaemia and myeloma. The present sequence is a protein encoded by one of the probes of the invention.

The present invention relates to single exon nucleic acid probes (SENP: see AA13115-AA157546). The present sequence is a peptide encoded by one such probe. The probes are useful for producing a microarray for predicting, measuring and dissplaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Mouse, cytostatic, antiinflammatory, immunoregulatory, tissue integrity, wound healing, immune response, vaccine, cancer, asthma, alleggy, cell trafficking, therapy, 28.6 kDa secreted protein.
Peptide #9264 encoded by probe for measuring placental gene expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human genome-derived single exon nucleic acid probes useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                0;

process which play a major role in induction of growth, cell migration of proteins which play a major role in induction of growth, cell migration of tissue specific cells. These proteins are important in the maintenance of tissue integrity and thus are important in wound healing. They are of tissue integrity and thus are important in wound healing. They are arithodies, to isolate corresponding interacting proteins or other compounds, to quantitatively determine levels of interacting proteins or other compounds, to quantitatively determine levels of interacting proteins or compounds, and as therapeutic target in a whole range of disease of their compounds, and as therapeutic target in a whole range of disease or states. Compositions comprising the novel proteins of the invention are useful for treating mammalian disorders. Polynuclectices of the invention are useful for treating mammalian disorders. Polynuclectices of the invention or are useful in genome and physical mapping, in positional cloning of are useful in genome and physical mapping, in positional cloning of condistructure tags for marking organisms), and for the disgnosis and treatment of mammalian diseases which is the consequence of inappropriate capturent of a vaccine or anti-cancer treatment, as immunoregulatory and anti-inflammatory molecule, as a spart of a vaccine or anti-cancer and for development of an anti-cancer treatment, and as a target for antagonists in the treatment of the invention. For risane and plantal remembration, to promote or hinch the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    the invention, for tissue and neural regeneration, to promote or block cell trafficking, and as anti-inflammatory and/or vaccine adjuvant. The present sequence is 28.6 kDa protein, a secreted protein from mouse.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel isolated polypeptide useful to isolate corresponding interacting proteins or other compounds, to quantitatively determine levels of interacting proteins or other compounds, and as therapeutic target -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The patent discloses novel polynucleotides and their corresponding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     (GENE-) GENESIS RES & DEV CORP LTD.

nh796_1. The sequence is predicted from a full-length cDNA clone (see AAX59356) isolated from a human adult brain (thalamus) CDNA library. The invention provides cDNA clones (see AAX59355.8) encoding novel secreted proteins (see AAX60404-10) of the human cestis, brain and foetal kidney. The polynucleotides and proteins are predicted to have blological activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and animals, although no supporting data are provided. Suggested activities include nutritional, cytokine, cell crowth, activin or inhibin, chemotoctic or chemokinetic, hademostatic, thrombolytic, receptor/ligand, antiinflammatory, cacherin or tumour invasion suppressor, and tumour inhibition
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        65 igilenlplldilkpgggtsggllggllgkvtsvipglnniidikvtdpgllelglvqsp 124

contain at least on epitope in their sequences. The present invention relates to detection of a target LS170 polynucleolide that comprises treating a test sample with at least one LS170-specific nucleic acid that has at least 50 percent identity with any of the sequences (AAX00801-09) which are fragments derived from various clones of LS170 gene. The LS170 which are fragments represent a set of configuous, partially overlapping sequences transcribed from lung tissue. They are used for diagnosis, staging, monitoring, in vivo imaging, prevention and treatment of lung disease. Particularly detection of LS170 polynuclectide, LS170 antigens, or anti-LS170 antidodies is indicative of disease. Cells transformed with an expression system comprising the LS170 nucleic acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                can be used to isolate related sequences; as standards and reagents in sasays, as targets for drug screening, and as components or targets for therapy, e.g. as antisense, ribozyme or triplex-forming agents, ho can be used to deliver therapeutic agents to LS170-expressing cells; directly as therapeutic agents (by neutralising LS170 polypeptides); in competitive binding drug screens, and to generate anti-idiotypic antibodies for use in rational drug design.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         sequences are used to express recombinant polypeptides. The polypeptides are used to raise Ab and for drug screening. LS170-related nucleic acid

Lung specific genes for developing products for diagnosing, monitoring,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence is encoded by a lung specific gene, designated Lug110, clone ID 135520, gene ID 236760. The specification describes methods for diagnosing the presence of lung cancer in a patient. The method comprises measuring levels of lung specific genes in cells, tissues or bodily fluids, and comparing the level to that of a normal human control. The methods can be used for diagnosing, monitoring, staging or prognosticating luny cencer, especially metastatic lung cancer. Antibodies against proteins encoded by lung specific genes can be used for imaging or, when conjugated to a cytotoxic agent, for

The invention relates to novel human secreted proteins, the nucleic acids encoding them. The protein may exhibit cytokine, cyll proliferation or cell differentiation activity or may induce production of other cytokines in certain cell populations and may exhibit immune stimulating or immune suppressing activity, which is useful for the treatment of various immune deficiencies and disorders e.g. severe combined immunodeficiency (SCID), autoimmune disorders e.g. multiple sclerosis,

systemic lupus erythematosus, rheumatoid arthritis, autoimmune pulmonary inflammation. The proteins are also useful in the treatment of diseases and disorders including tissue, skin and organ transplantation and in graft-versus-lost diseases (CVHD), in the induction of tumour immunity, myeloid or lymphoid cell deficiencies, wound healing and tissue repair, in the treatment of burns, incisions and ulcers; as well as in treatment of periodontal disease, osteoporosis or osteoarthritis, mediated by inflammatory processes, diseases of the peripheral nervous system,
                                                                                                                                                                                                                                                                                   sepsis, inflammatory bowel disease, ulcers, bone regeneration. The protein, having activin- or inhibin-related activities is useful as a contraceptive based on the ability of inhibins to decrease fertility in female mammals and decrease spermatogenesis in male mammals. The proteins and nucleic acids are also useful as food supplements. The present sequence represents a secreted protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     85 DCKGLNLSFPVTANVTVAGPIIG-QIINLKASLDLLTAVTIETDPQTHQPVAVLGECASD 143

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 12, Agreemence 2, Agreemence 98, Asequence 98, As

HSBA49G10
HUMBA DNA linear PRI 20-JUN-2001
HUMBA DNA sequence from clone RPI1-49G10 on chromosome 20 Contains a gene similar to bovine salivary protein BSP30, the LOC51297 gene for LUNX protein, 5, end of a gene encoding a protein similar to secundogene minor salivary gland protein, a novel gene, a pseudogene similar to STAT-induced STAT inhibitor-2, a pseudogene similar to ribosomal protein L12, a putative novel transcript, AL121901
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CDS
variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:

Em.; BMEL: Swi. SWISSPROT: Tr.; TREMBL: Wp.; WORMPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 20, constructed by the Sanger Centre Chromosome 20 http://www.sanger.ac.uk/HGP/Chr20

IMPORTANT: This sequence is not the entire insert of clone RP1149G10 It may be shorter because we sequence overlapping sections only once, except for a 100 base overlap.

The true left end of clone RP1149G10 is at 1 in this sequence. The true left end of clone RP511874 is at 164494 in this sequence. The true right end of clone RP511874 is at 164494 in this sequence. The receipt as clone RP4-73302 is at 27823 in this sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest.
